New “Getting Around On The Ground” Software Helps Pilots Prevent Runway Incursions

FOR IMMEDIATE RELEASE: Oak Creek, Wisconsin, October 13, 2001 — Aviation Tutorials Company, LLC has released its latest product, Getting Around On The Ground, which is designed to help pilots prevent runway incursions. This interactive, graphically-stunning tool makes it easy to learn ways of operating safely on an airport surface. Considering the rising runway incursion rate, pilots of all experience levels need to learn ways of preventing incursions.

To accomplish this, Getting Around On The Ground provides 15 instructional sections, with over 3 hours of voice-narrated instruction. More than 125 “3-D” graphics and 40 quiz questions are used to train the pilot.

After following the simple installation instructions, the pilot is presented with a Main Menu of options. The Introduction provides shocking statistics on runway incursions, including their causes. The pilot is then taught how to recognize, interpret, and use airport markings, signs, and lights. Each section ends in a group of quiz questions. Once the pilot has mastered this knowledge, several additional sections are provided to show the pilot how to use this knowledge operationally. This includes a section on airport ground procedures, and a section with 17 “Quick Tips,” which are designed to provide instant safety tips that the pilot can start using immediately. The software content culminates in a section of case studies (with additional free case studies available at www.avtutorials.com), and a section that contains online literature pertaining to safe airport ground operations.

Getting Around On The Ground is unlike any other training product—it is operationally-oriented, designed to have an effect on pilots’ day-to-day flight operations. This is accomplished through the extensive use of “3-D” graphics. While most other training material shows top-down views of airports and associated markings, this software presents views of the airport from the cockpit. Sharp imagery shows the airport environment low-to-the-ground, to illustrate exactly what pilots should be looking for during actual aircraft operations. Plus, the lesson material pinpoints areas that are troublesome to most pilots, while highlighting ways of preventing accidents.

Getting Around On The Ground is perfect for all pilots, from students to ATP’s. It’s an exciting, interactive, multimedia CD designed to make a difference in pilots’ operations. Since no pilot is immune from the possibility of a runway incursion, this product can help a pilot translate new skills and knowledge to that next flight.

Affordably priced at \$29.00, Aviation Tutorials Company, LLC welcomes orders for Getting Around On The Ground. In business since 1995, Aviation Tutorials Company offers several software training products for aviation. Additional information on Getting Around On The Ground is available, as well as online ordering, at www.avtutorials.com, or you may call 414-761-9331.
