The Navigation CD-ROM New Release Includes A New Fifth Tutorial

FOR IMMEDIATE RELEASE: Oak Creek, Wisconsin, U.S.A., August, 2000 — Aviation Tutorials Company, LLC has released a new edition of The Navigation CD-ROM, with improved voice narration and a fifth tutorial: Using HSI & RMI. The Navigation CD-ROM, designed for Microsoft® Windows, includes five professionally-developed multimedia tutorials that teach everything about:

- VOR Navigation
- NDB Navigation
- HSI & RMI Use
- GPS Navigation
- Airspace

Written by airline pilots and flight instructors, each tutorial emphasizes the "hands-on" operational aspect of navigation. This CD-ROM is especially useful for users who wish to learn real-world skills that can be used in the aircraft. This CD-ROM is not FAA test prep, but instead focuses on developing knowledge, skill, procedures, and confidence in-flight.

The Navigation CD-ROM was designed for ease of use, offering clear, organized presentation of material. Animation, sound narration, quizzes, and real-world scenarios are used to teach navigation. A "building-block" teaching method is used throughout, which relates complex navigational topics to everyday life concepts. The user should feel right at home as VOR Navigation, NDB Navigation, HSI & RMI Use, GPS Navigation, and Airspace are taught. To provide "hands-on" learning that is essential to good airmanship, aircraft equipment simulation is used, allowing the user to set frequencies, turn knobs, and much more. Every topic is presented step-by-step, using simple instructions and colorful graphics. **No prior experience is required to use The Navigation CD-ROM.** If you can click a mouse, you can use this software.

After following a few simple instructions, the user will be up-and-running in minutes with The Navigation CD-ROM. There's no apprehension when using this software. Its clearly-organized graphical interface provides simple controls that allow navigation from lesson to lesson. If a topic needs to be reviewed again, it's all a matter of clicking the mouse. As one pilot remarked, "I really understood [these subjects] after going through the tutorials, and I felt like I knew what I was doing when I got into the airplane."

Affordably priced at \$99, the user benefits by using the same type of cutting-edge educational technology used by the airlines and military. The user will gain a level of understanding and capability that builds a foundation of safety and professionalism. The Navigation CD-ROM makes learning navigation easy by combining VOR, NDB, HSI & RMI, GPS, and Airspace in one easy-to-use CD-ROM. Aviation Tutorials Company, LLC welcomes orders and inquiries: (414) 761-9331.
